

In the Claims

Claims 1-31 and 37-67 were previously canceled without prejudice.

Claims 32-36 are pending and are listed below:

1.-31. (Canceled).

32. (Original) A method of processing media samples comprising:  
providing one or more media samples individual ones of which have a  
timecode; and

calculating a represented time associated with one or more of the media  
samples in accordance with the following equation:

$time = x + (frame\ count * UPF + offset) / UPS$ , where:

$x$  is a measure of time associated with the media sample and ascertained  
from the media sample's timecode;

"frame count" is a value associated with a frame number of the media  
sample;

"UPF" comprises a number of basic units of time to be added for each field  
count increment;

"offset" specifies a difference between the time represented by the  
timecode associated with the media sample and a represented time; and

"UPS" comprises a number of basic units of time in a timebase per unit of  
time.

33. (Original) The method of claim 32, wherein " $x$ " is associated with a  
number of seconds specified by the number of whole seconds represented in a

1 SMPTE timecode, either as a total number of seconds or as parameters  
2 representing hours, minutes, and seconds.

3  
4 34. (Original) The method of claim 32, wherein "offset" is selected as a  
5 function of a true frame rate of the media samples.

6  
7 35. (Original) The method of claim 34, wherein the true frame rate  
8 comprises a fractional number of frames per unit of time.

9  
10 36. (Original) The method of claim 35, wherein the unit of time  
11 comprises seconds.

12  
13 37.-67. (Canceled).
